The Need for Training

Births in community settings, and community services in general, are gaining more attention as an option for some low risk mums (The Birthplace Study, 2014; NICE, 2014), and to support continuity of care for mums (Better Births, 2016).

Despite this, community-specific training, where resources are low, seems to be rarely provided for community-based healthcare professionals.

Course Content

This one-day course will review and update on important elements in the management of emergency skills that may be needed when women birth at home.

It will include:

- Vaginal breech birth.
- Neonatal resuscitation.
- Cord prolapse (to include case discussion).
- Shoulder dystocia (also in water birth).
- Maternal collapse.
- Postpartum haemorrhage (PPH).
- A physiological birth session (paramedics only).
- Communication in a pre-hospital obstetric emergency.
- Profession-specific workstations – communication with the 999 team, midwifery jargon-busting.

For those who attend planned or unplanned births in the community such as **community midwives, independent midwives, paramedics, MCAs, GPs and practice development midwives.**

Course Directors

Ms Michelle Keeler

Senior Midwife and Supervisor of Midwives Medway NHS Foundation Trust

Kirstie Savege

Clinical Practice Facilitator (CPF), Royal London Hospital

Feedback

93% of delegates rated 'Very Good' or 'Excellent' for overall quality of education.

93% reported that they **intended to modify practice** in a minor or major way following the course.

*"Would recommend to any midwife but **should be essential in all trusts as part of mandatory training.**"*

*"It's these kinds of days that **make midwifery safer** for women by making sure we are **updated in emergencies.**"*

*"A very **thought provoking** day for a **paramedic**. Made me realise how much I didn't know that I should."*
