The Need for Training

The Department of Health's 'Safer Maternity Care' report (Nov, 2017) outlined, in detail, the national strategy to achieve the 'Maternity Safety Ambition' of halving stillbirths, neonatal and maternal deaths, and brain injuries by 2025. It stated that the ambition will not be achieved *"unless the rate of preterm births is reduced"*, with a further ambition set out to reduce preterm births from 8% to 6%.

Course Content

This study day presents both an understanding of the origins of the outcomes of stillbirth, preterm birth, and fetal growth restriction, and practical ways in which these can be influenced. This will help teams meet the aspirational targets within the 'Maternity Safety Ambition', set out in the 'Saving Babies' Lives' care bundle. Local Maternity Champions would benefit from attendance, as well as frontline maternity staff.

Ensuring effective assessment and care of at-risk babies before and at the time of delivery.

- To provide an evidence-based clinical overview of care for babies at risk of preterm birth, fetal growth restriction, and stillbirth.
- To be aware of and conversant in prediction, prevention, and management of preterm birth.
- To understand and implement the best evidence in relation to the screening, diagnosis and management of SGA/FGR babies.
- To understand the origins of stillbirth and implement practical interventions to reduce its incidence.

Please note: Interactive workstations will be in groups of no more than 12, each with experienced faculty drawn from all relevant groups.

Course Directors

Professor Alex Heazell

Professor in Obstetrics & Honorary Consultant
Obstetrician, University of Manchester

Dr Ed Johnstone

Consultant Obstetrician; Senior Lecturer in Obstetrics & Fetal Medicine,
University of Manchester

Mr Nigel Simpson

Senior Lecturer in Obstetrics & Gynaecology, University of Leeds

Ms Suzanne Thomas

SGA Specialist Midwife (Placenta Clinic & Rainbow Clinic); Research
Midwife Coordinator, St Mary's Hospital, Manchester
