The Need for Training

The most recent report from the UK and Ireland Confidential Enquiries into Maternal Deaths (2017) reveals that there is no significant decrease in the maternal death rate in the UK, and the rate between 2013-2015 was 8.8 per 100,000. Messages from investigations into maternal deaths include recommendations for critical care; such as, early recognition of critical illness, prompt involvement of senior clinical staff, and authentic multi-disciplinary teamworking (Knight, 2017).

Midwives and obstetricians involved with the critical care of the obstetric patient.

Course Content

This exciting and pertinent one-day multidisciplinary course will teach the physiology and management of the acutely unwell mother. Delegates will be able to identify and appropriately escalate the deteriorating patient; be aware of the standards required from staff managing the unwell mother with acute disease in pregnancy; and be aware of the human factors impeding good obstetric care with a deteriorating patient.

The course will include lectures, workstations, and group discussions in the following key areas:

Course content includes:

- Cardiovascular and respiratory physiology in pregnancy; effective monitoring and management of cardio-respiratory compromise.
- Renal physiology in pregnancy and the importance of urine output.
- Identification and management of maternal sepsis.
- Neurological assessment and management of the obstetric patient.
- Developing an appreciation of the role of 'human factors' in delivering safe and effective care.
- Workstations, including; ECG and ABG interpretation, invasive monitoring, and case-based discussions.

Feedback

86% of delegates rated 'Good', 'Very Good' or 'Excellent' for overall quality of education

87% reported that they intended to modify practice in a minor or major way following the course.

"I found the whole day very interesting and engaging and will certainly be using what I have learnt into my role teaching students and in my clinical role."

"Good range of deteriorating patient scenarios and emphasis on team working."

"An excellent study day - interesting, informative and thought provoking."

"I liked discussions during lectures as it led to interesting facts and examples. Great knowledge of lecturers. Great informal atmosphere."
